                            New nucleic acids are described which encode a protein comprising CC the second and third type I repeats of human TSP (thrombospondin)-1, CC but not the TGF (transforming growth factor)-beta activation region CC of human TSP-1. The nucleic acid of TSP (thrombospondin)-1 containing the second and third type-1 repeats and the COMP (cartilage colloqueric matrix protein) assembly sequence (COMP/TSP-1) was protein assembly sequence (COMP/TSP-1) was protein assembly sequence (COMP/TSP-1) caused inhibition of the growth of tumours in mice models. Thus the nucleic acids and proteins may be useful for treating CC angiogenesis related diseases such as cancer (by reducing the rate of cartinopathy, corneal graft rejection, and glaucoma. They may also be used for treating human immunodeficiency virus (HIV) infection. CC used for treating human immunodeficiency virus the blood-brain controls tumour growth independently of growth of the protein growth of the protein growth independently of growth of the protein controls tumour growth independently of growth of the protein controls tumour growth independently of growth of the protein controls tumour growth independently of growth of the protein controls the protein growth independently of growth of the protein controls the protein growth independently of growth of the protein controls the protein growth independently of growth of the protein controls the protein growth independently of growth of growth of the protein growth independently of growth of growth of the protein growth growth of growth 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding chimeric proteins such as cartilage oligomeric matrix protein (COMP)/thrombospondins (TSP)-1 and 2, useful for inhibiting angiogenesis and treating diseases such as cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-514823/46.

                        The invention comprises a method of detecting a breast cancer-associated CC transcript in a cell from a patient. The method of the invention involves CC contacting a biological sample from the patient with a nucleotide that CC hybridises to one of the 69 breast cancer-associated gene sequences shown in the specification. The method of the invention is useful in the CC diagnosis or prognosis of breast cancer, and for detecting genes that are CC up or down-regulated in breast cancer cells. Genes identified by the CC method of the invention can be used in diagnostic purposes and also as CC targets for screening for therapeutic compounds that modulate breast CC cancer (e.g. hormones or antibodies). Identification of genes that are CC over or under expressed in breast cancer can additionally provide high-cc resolution, high-sensitivity datasets which can be used in the areas of CC diagnostics, therapeutics, drug development, pharmacogenetics, protein CC structure and blosensor development. Amino acid sequences ABJ05536 - CC ABJ05604 represent the proteins encoded by the 69 breast cancer-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                   The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACC50076 to ACC5034 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a significant increase in the level of expression of the marker in the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene therapy. The method is useful for diagnosing and treating breast

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         234

Nature 397:176-180(1999).

-i- FUNCTION: INTERACTS WITH OUTER MEMBRANE RECEPTOR PROTEINS THAT CARRY OUT HIGH-AFFINITY BINDING AND ENERGY DEPENDENT UPTAKE INTO THE PERIPLASMIC SPACE OF SPECIFIC SUBSTRATES. IT COULD ACT TO TRANSDUCE ENERGY FROM THE CYTOPLASMIC MEMBRANE TO SPECIFIC ENERGY-REQUIRING PROCESSES IN THE CYTOPLASMIC MEMBRANE TO SPECIFIC ENERGY-RELEASE INTO THE PERIPLASM OF LIGANDS BOUND BY THESE OUTER MEMBRANE PROTEINS (BY SIMILARITY).

-i- SUBCELULUAR LOCATION: ANCHORED TO THE CYTOPLASMIC SPANS THE PERIPLASM (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TIGRAINS; TIGRO1152; tonB Cterm; 1.
